U.S. Patent and Trademark Office PTOL-326 (Rev. 1-04)

Application/Control Number: 10/029,551

Art Unit: 1632

Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-3, 19, and 23 drawn to methods of treating diabetes by administering a gastrin/CCK receptor ligand and an EGF receptor ligand, classified in class 514, subclass 2
- II. Claims 4-7, 20, 25-27, and 34-35, drawn to methods of transplanting mature insulin-secreting beta-cells, classified in class 424, subclass 93.1.
- III. Claims 20-22, 24, 28-29, and 34-35, drawn to methods for obtaining an expanded population of insulin-secreting beta cells ex vivo, classified in class 435, subclasses 325 and 395.
- IV. Claims 30-33, drawn to kits comprising a gastrin/CCK receptor ligand and an EGF receptor ligand, classified in class 530, subclass 350.
- V. Claims 36-37, drawn to methods of administering a compound that increases the secretion of an endogenous gastrin or cholecystokinin, classified in class 424, subclass 600.

The inventions are distinct, each from the other because of the following reasons:

1) Invention I is patentably distinct from inventions II and III in that the active ingredient of invention I is a combination of two proteins which are directly administered to the patient. As such, invention I does not require the use of the isolated pancreatic beta cells of inventions II and III. Further, proteins are substantially different in physical, chemical, structural, and functional

Application/Control Number: 10/029,551

Art Unit: 1632

properties that whole cells, are made using different techniques and can be used for substantially different purposes.

- 2) Inventions II and III are related as process of making and process of using the product, insulin-secreting beta cells. The use as claimed cannot be practiced with a materially different product. Since the product is not allowable, restriction is proper between said method of making and method of using. The product claims, claims 20, 25, and 34-35 will be examined along with the elected invention (MPEP § 806.05(i)).
- 3) Inventions I-III and invention IV are related as product and process of use. The inventions can be shown to be distinct if **either** or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different process of using that product (MPEP § 806.05(h)). In the instant case, a composition comprising a gastrin/CCK receptor ligand and an EGF receptor ligand can be used in a variety of *in vitro* and *in vivo* assays and methods other than those recited in inventions I-III, including the use of the compositions in *in vitro* cell free binding assays.
- 4) Inventions I-IV and V are unrelated. Invention V recites the administration of compounds that are not required in inventions I-IV and which are structurally, chemically, physically, and functionally different from a gastrin/CCK receptor ligand, an EGF receptor ligand, or insulin secreting beta-cells.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter, different

Application/Control Number: 10/029,551

Art Unit: 1632

classification, and different search requirements, restriction for examination purposes as

indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an

election of the invention to be examined even though the requirement be traversed (37 CFR

1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the

inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the

currently named inventors is no longer an inventor of at least one claim remaining in the

application. Any amendment of inventorship must be accompanied by a request under 37 CFR

1.48(b) and by the fee required under 37 CFR 1.17(i).

Any inquiry concerning this communication from the examiner should be directed to

Anne Marie S. Wehbé, Ph.D., whose telephone number is (571) 272-0737. The examiner can be

reached Monday- Friday from 10:30-7:00 EST. If the examiner is not available, the examiner's

supervisor, Amy Nelson, can be reached at (571) 272-0804. For all official communications, the

technology center fax number is (703) 872-9306. For informal, non-official communications

only, the examiner's direct fax number is (571) 273-0737.
